How the product works

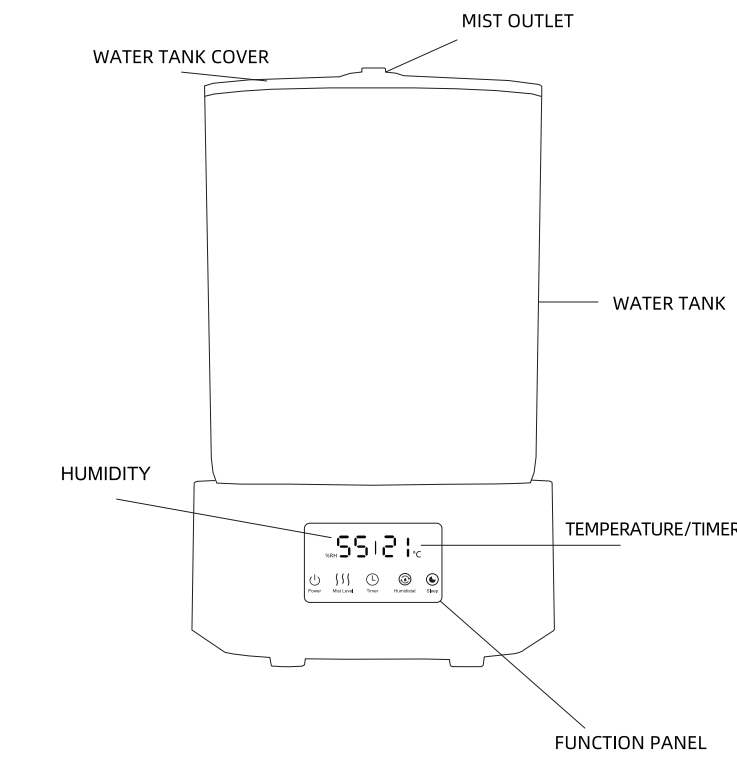

The ultrasonic air humidifier uses ultrasonic vibration to generate 17 million times per second according to the frequency oscillation principle, which converts water into ultra-fine particles of 1~5 microns, and then diffuses water into the air through the pneumatic device, so as to achieve the purpose of humidifying the air evenly.

Product usage

- Put the machine on a horizontal table. Pick up the water tank cover and pour an appropriate amount of clean water into the tank
Tap water or purified water to the maximum water level (MAX). (Power must be turned off when injecting water)
- Cover the water tank cover and turn on the power. Before connecting to the power supply, please confirm that the rated voltage must match the machine. The working voltage of the device is consistent.
- Turn on the power switch and the machine starts working.
- When the water level of the machine is too low, the machine will be cutting off the power supply and stops working. Please turn off the power switch first, then add water to the water tank.

Trouble shooting methods

If your humidifier is not working properly, please check below before requesting service

Fault phenomenon	Cause Analysis	Method of elimination
No display on the screen	The power is not connected and switch is not turned on	Connect power on to the switch
Flashing red light on display screen, no spray	Low water level	Add tank capacity to appropriate location and wait one minute
Power-on is good, No spray	1. The atomizer scales 2. The constant humidity setting is lower than the constant humidity function	1. Clean atomization sheet 2. Raise the constant humidity value or disable the constant humidity function
Abnormal noise	Resonates with the countertop	Place it on a solid and flat surface
The screen shows that there is water in the tank, but display water shortage, and status "low alert"	The machine recognizes that the fault is stuck	Move the float up and down smoothly

After the above treatment, the machine still can not work normally, please contact the company's after-sales service center or local dealers in time, our company will serve you wholeheartedly.

Cleaning maintenance

- Clean the water tank, sink and atomizing sheet every week, and unplug the power plug before cleaning.
 - External cleaning: wipe the external surface with a clean soft cloth below 40°C.
 - Do not use hard objects to avoid damaging the parts.
 - Do not use chemical detergents to clean.
 - Always replace the water in the water tank to keep the inside of the humidifier dry.

- Descaling method of transducer and machine base**
Before cleaning, make sure to turn off the power and unplug the power plug.
Pour the disincrustant into the base, and then add warm water in about 60s to make the disincrustant dissolve all, and then soak for 5-10 minutes.
Use a cleaning brush to scrub the surface of the transducer until the scale is removed.
At the same time, clean the base and the surface of the machine with clean water.
